

The Enterprise Plan

TryMyUI specializes in providing candid, actionable feedback from the kind of visitors you want on your website or app. Our usability testing software captures the screens and voices of people navigating your UI and speaking their thoughts aloud as they go.

We enable researchers & designers to quickly learn what's working and what's not working, what's confusing and what's well-received, through a suite of analytical tools created with the sole purpose of getting the user's view.

TryMyUI recognizes the unique challenges faced by a large organization in obtaining data and user analytics in a deadline-driven environment, and then extracting and relaying insights from the data to the stakeholders in an effective manner. Our **Enterprise Plan** helps you to coordinate your usability research within and across teams in an organized, accessible, streamlined fashion and compile your insights into impactful reports for the key decision-makers in your company.

PRICING

Month-to-month	Starts at \$1,200/mo. 30+ credits each month; 1 credit = 1 user result Unlimited testing with your own users
Annual	Starts at \$12,000/yr. 360+ credits up front for the whole year Unlimited testing with your own users

Below: Enterprise features suite

Solutions Overview: Enterprise Tier

- **Custom test results per month + Unlimited testing with your own users:**

An iterative and user-centric design process requires lots of testing. With our monthly provision of a custom quantity of test credits, as well as unlimited testing with your own recruits, you can test everything, test iteratively, and test often. Moreover, with access to special **screeener questions**, you can target your user's demographics AND psychographics.

- **Multi-user login (4 additional seats included)**

Engage your whole team in the UX research process with multi-user login. Add any number of seats so team members can create their own tests and view shared projects.

- **Collaborative analysis & Highlight reels**

Design is a collaborative process, and the TryMyUI Enterprise plan is set up to facilitate that. Share tests & project folders with colleagues to identify, analyze, and discuss key insights with the whole team. Use tagged, timestamped **annotations** to save and show major issues and 'aha' moments, and then generate customized, data-backed **reports & highlight reels** that distill insights from your team's analysis.

- **UXCrowd cluster analysis**

Our UXCrowd feature clusters major insights from your results with a crowdsourced voting system among the testers. Scale up your test size and get more powerful, objective data in less time, so you can start your next iteration with a pre-prioritized roadmap.

- **UX Diagnostics & Iterative testing**

With projects spanning so many stages, you may find your testing needs fragmenting. TryMyUI offers testing for concepts, wireframes/prototypes, and live websites, as well as segmentation of your tests into sprints. With sprints, you can iteratively track the impact your design changes have on key metrics like task usability, duration, or completion rates.
