

# User Story Mapping Example

## User Need

AS a unregistered user I want to signup and login to the system in order to be able to use it

## High-Level Solution Direction

- User is able to register for the system. Email will be used as a username.
- User will be Logging In with username/password credentials which have been provided on the registration screen
- User should be able to restore password in case if it was forgotten/lost

## Relevant High-Level Feature Discussion pages

(these pages are used to discuss features before design has started)

[Sign In page](#)

## Success Criteria

- User should be able to register a new account in the system, unless the username already exists.
  - Email will be used as a username.
  - Only valid email addresses are accepted as a username
- User should be able to login with the new account system
- User can change a forgotten password via an 'change password link' sent to his email

## Not in a scope / Later / Ideas

- User can be authorized via a Gmail account
- User can be authorized via a Facebook account
- User can use remember my credentials option
- After 5 (Five) unsuccessful LogIn attempts, the user account should be blocked

## User Journey

	Step	Designs
1	Fill in account details	<a href="#">Links to InVision</a>
3	Send confirmation email	

2	User's authorization flow	<hr/> <hr/> <hr/> <a href="#">Links to InVision</a>
3	Forgot password flow	<hr/> <hr/> <hr/> <a href="#">Links to InVision</a>
4	Restore password - send a confirmation email	
5	Restore password link expiration period	

## Open Issues

	Issue	Resolution	Assigned to	Created	Status
01	Shall we also support Facebook login?	We decided not to do this at this point.	<a href="#">Andrei Skryabin</a>	08 Nov 2018	Closed
